

Change your view with beautiful retractable Motorized guillotine systems...

ABOUT

Olympos Panoramic Systems (Movable Handrail) is used in hotels, houses, shops, restaurants, patisseries, conservatories, terraces. System worked manual also without any motor so it is more useful than other systems. It is designed to turn indoor space into open space with just one finger slide.

The system is opened and closed by moving up and down. It is insulated with 4 wings and has single or 3 wings glass options. One wing is fixed and the other tree moves. You can stop the moving wings at any time. You can open either half or full. It guarantees silent and comfortable movement. The wheels placed on the side of the aluminum profile panels move in the wheel channels on the rails and held with steel ropes, allowing the system to move in a balanced way.

The system can optionally be gathered both above and below. When it is closed, it will never leak water and air. It gives near perfect results with insulated glass. It adapts to any environment with its modern and elegant appearance..
