Précontraint Technology

Précontraint technology, which is protected by patents worldwide, enables the production of flexible composite materials with exceptional dimensional properties above the normal standards of the sector.

Précontraint technology consists of applying a coating with biaxial tension throughout the production cycle (along weft and warp): the flexible frame made from high tenacity composite yarn is coated with several layers of polymers, and covered with dirt resistant surface treatment.

The materials using Précontraint technology gain unique properties in terms of resistance, dimensional stability, lightness. This technology eliminates deformation due to load and provides a longer service life.

Smart Composite Spinning Technology

Smart Yarn technology enables the production of composite yarns to have greater flexibility and provides a unique advantage in the field of use.

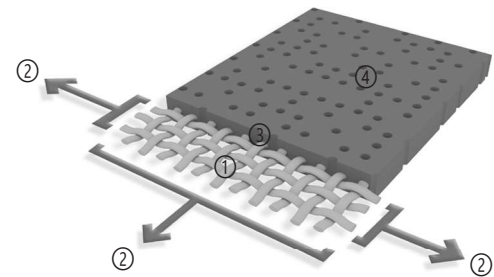

This technology allows the combination of a central core, providing the desired mechanical properties, sheath, appearance, finish, toughness and resistance.

Smart Yarn technology reduces the weight of material and enables the production of product which has unique insulation and waterproof features.

Exclusive Précontraint® Technology

Patented worldwide, the Précontraint® technology by Serge Ferrari involves keeping the composite under tension throughout the manufacturing cycle. It gives our materials exceptional performance that enable them to surpass market standards in terms of dimensional stability, mechanical strength, coating thickness and flatness.

High-tenacity polyester micro-yarn based cloth	1 Superior elongation and tear resistance
A coating with fabrics under bi-axial constant tension in both warp and weft directions	2 No deformation during processing and use
Greater coating at the top of the yarns and a dirt resistant surface treatment	3 Superior aesthetic and mechanical durability
Exceptional flatness and thinness	4 Smooth finish, easy to clean, space saving, easy rolling

I Prefer - İsteğim

protect light, privacy conserved.

thermal comfort.

blackout.

water proof.

wide ranges of colors.

allows natural light, visual comfort.

acoustic.
